Hollard.	**(Release)** **UAT Signoff**	Version September 2017

Purpose of this Document

This document serves as the System Integration Testing Sign-off for the release of Software into Production.

The UAT Phase was performed to ensure that the program substantially conforms to the documented user requirements and that it actually meets the needs of users.

The Architect's signature confirms that he\she is satisfied that the code/implementation being released matches the signed-off architecture design presented in the architecture forum.

Following the acceptance of this document, the Production phase will be performed.

UAT only needs to be signed off by the teams responsible for the release.

General Information

Version Number : V1.2.1
